EDUCATION

CORNELL UNIVERSITY, College of Engineering

Ithaca, NY

Major: Mechanical Engineering | Minor: Aerospace Engineering | GPA: 3.73

August 2023 - May 2027

Relevant Courses: Statics | Dynamics | System Dynamics | Structural Dynamics and Vibrations Analysis | Heat Transfer | Intro to Mechanical Design | Intro to Aeronautics | FEA for Mechanical and Aerospace Design | Mechanics of Materials | Mechatronics | Introductory Fluid Mechanics | Thermodynamics | Uncertainty Analysis in Engineering

Activities: Cornell Unmanned Air Systems | Symbiotic Engineering and Analysis Lab | Cornell Cycling Club (3-year officer) | MAE 3260 (System Dynamics) TA | Campus Tour Guide

EXPERIENCE

The Boeing Company, Everett, WA

May 2026 - August 2026

Loads and Dynamics Engineering Intern - 737 MAX Dynamic Flight Loads and Flutter

- Established CG acceleration thresholds to waive unnecessary inspections after pilot-reported severe turbulence
- Simulated aircraft response to wind gusts using Easy5 and internal Boeing tools on Linux HPC
- Conducted a survey of 10,000+ gust conditions utilizing a B737-MAX dynamic loads model
- Utilized Matlab to plot airplane CG response vs turbulence frequency and vs discrete gusts at various gust gradients
- Conducted parameter variation analyses to characterize growth rates of B737 horizontal stabilizer flutter modes
- Compared NG and MAX mode shapes and frequencies using NASTRAN models, visualized flutter modes on Patran

Cornell Unmanned Air Systems Project Team, Ithaca, NY

February 2025 - Present

Structures & Payloads Engineer

- Designed and fabricated GoPro gimbal (100° roll/pitch) achieving 60% weight and 55% torque reduction vs. prior model
- Modeled full assembly in SolidWorks; selected servos, bearings, and dowel pins for strength and manufacturability
- Integrated gimbal hardware with aircraft avionics; collaborated with electrical and imaging teams on interface design
- Manufactured and tested 4+ gimbal prototypes using 3D-printed and ordered parts, resolving issues related to GoPro fit, bearing motion, part connections, center of gravity of rotating parts, and space constraints within the aircraft
- Cut bay doors in carbon composite aircraft fuselage using a Dremel; designed, installed, and tested custom bay door

Symbiotic Engineering and Analysis Lab at Cornell University, Ithaca, NY

July 2024 - September 2025

Undergraduate Research Assistant

- Designed and validated mounts for a 94-lb pressure vessel and 25-lb water pump using Fusion 360 and FEA
- Assembled full hydraulic testing system (6 valves, 9 sensors, 40+ fittings) for high-pressure water treatment experiments
- Brainstormed schematics of a WEC-driven carbon sequestration system that pumps 1 GtCO₂/year to depth of ~3000m
- Made design decisions based on suitability of different sequestration mediums and methods with WEC power
- Assessed optimization methods for RM6 WEC architecture through literature review, informing design tradeoffs

Cornell University Office of Visitor Relations, Ithaca, NY

February 2024 - Present

Campus Tour Guide/Senior Information Specialist

- Use strong communication skills to create a welcoming and positive experience for visitors and prospective students
- Give 2-5 campus tours/week about Cornell's colleges, history, and student life for groups of 10-30 visitors
- Answer calls and emails directed to the university, offer guests self-guided tours, answer questions about Cornell

Cornell University Systems Engineering, Ithaca, NY

June 2025 - August 2025

Summer Research Assistant

- Simulated hybrid wind-wave energy converter dynamics using MATLAB, Wec-Sim, and ANSYS AQWA
- Modeled hydrodynamic bodies on CAD and evaluated stability and power capture efficiency of various architectures
- Built Simulink models of each configuration; wrote scripts in MATLAB to analyze their performance

SKILLS & INTERESTS

Software: SolidWorks, Fusion 360, AutoCAD, MATLAB, ANSYS (FEA/AQWA), Simulink, Easy5, Linux OS, Patran, MS Office Suite

Core Skills: CAD Modeling, Mechanical Design, Rapid Prototyping, Finite Element Analysis (FEA), Modal Analysis

Interests: Mechanical Design, Structural Dynamics, Vibrations, Sustainability, Entrepreneurship, Cycling, Soccer
